Wide-gamut colour spaces

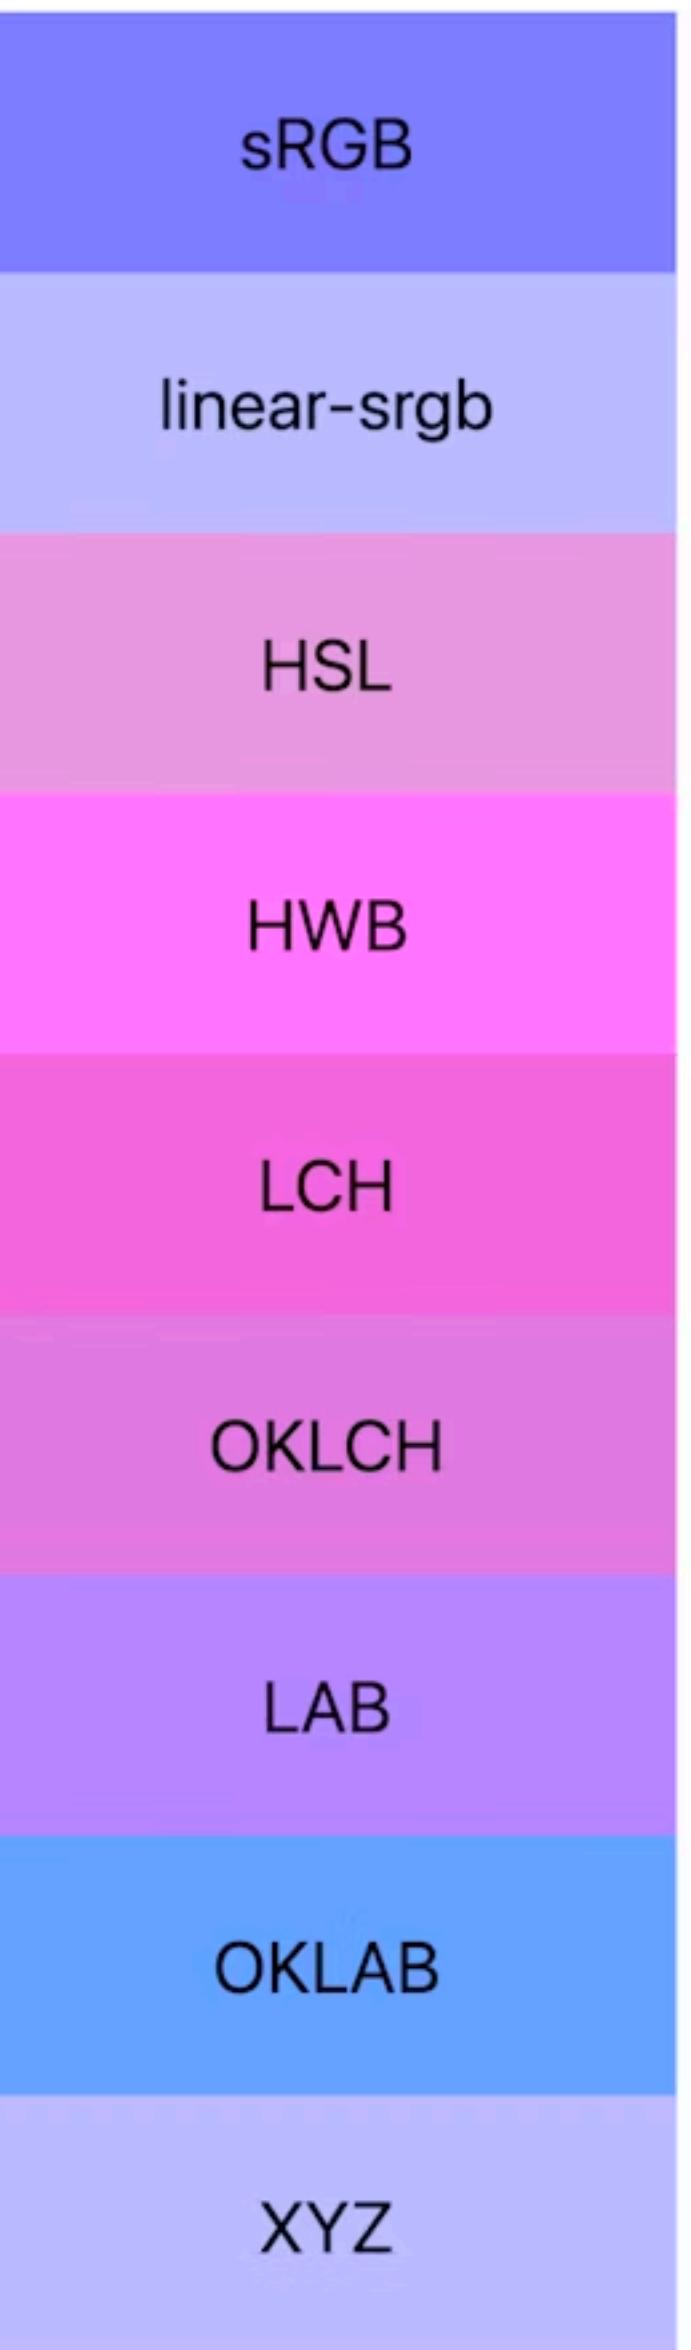

- [sRGB](#)
- [RGB 98](#)
- [Display_p3](#)
- [Rec2020](#)
- [ProPhoto](#)
- [CIE](#)
- [HVS](#) (human visual gamut)

color-mix

```
color-mix(in srgb, blue, white);  
color-mix(in srgb-linear, blue, white);  
color-mix(in lch, blue, white);  
color-mix(in oklch, blue, white);  
color-mix(in lab, blue, white);  
color-mix(in oklab, blue, white);  
color-mix(in xyz, blue, white);
```

```
:root {  
    --colorPrimary: hotpink;  
    --colorPrimary-a10: color-mix(in srgb, var(--colorPrimary), transparent 90%);  
    --colorPrimary-a20: color-mix(in srgb, var(--colorPrimary), transparent 80%);  
    --colorPrimary-a30: color-mix(in srgb, var(--colorPrimary), transparent 70%);  
    --colorPrimary-a40: color-mix(in srgb, var(--colorPrimary), transparent 60%);  
    --colorPrimary-a50: color-mix(in srgb, var(--colorPrimary), transparent 50%);  
    --colorPrimary-a60: color-mix(in srgb, var(--colorPrimary), transparent 40%);  
    --colorPrimary-a70: color-mix(in srgb, var(--colorPrimary), transparent 30%);  
    --colorPrimary-a80: color-mix(in srgb, var(--colorPrimary), transparent 20%);  
    --colorPrimary-a90: color-mix(in srgb, var(--colorPrimary), transparent 10%);
```

Trig Functions

Browser support

`sin()`, `cos()`, and `tan()`

The core three “trig functions” are:

- `cos()`: Returns the cosine of an angle, which is a value between `-1` and `1`.
- `sin()`: Returns the sine of an angle, which is a value between `-1` and `1`.
- `tan()`: Returns the tangent of an angle, which is a value between `-∞` and `+∞`.

`asin()`, `acos()`, `atan()`, and `atan2()`

The “arc” or “inverse” counterparts to `sin()`, `cos()`, and `tan()` are `asin()`, `acos()`, and `atan()` respectively. These functions do the calculation in the opposite direction: they take a numeric value as their argument and return the corresponding angle for it.

Finally there's `atan2()` which accepts two arguments `A` and `B`. The function returns the angle between the positive X-axis and the point `(B, A)`.

pure CSS 3D

trigonometry
in CSS! 🎉

cool tricks!

1st time ever 😍

Advanced :nth-child

New in [CSS Selectors Level 4](#) is the ability to optionally pass a selector list into `:nth-child()` and `:nth-last-child()`.

```
:nth-child(An+B [of S]?)  
:nth-last-child(An+B [of S]?)
```

When `of S` is specified, the `An+B` logic is only applied onto elements that match the given selector list `S`. This essentially means that you can prefilter children before `An+B` does its thing.

/ HTML

```
1 <main>
2   <h2>Record Wall</h2>
3   <div class="no-support" data-
support="selector-nth-of-s"><p>Your
browser does not support fine-grained
<code>:nth-child()</code> selections.
Please try Safari 9+ or Chrome 111+</p>
</div>
4   <ul class="albums">
5     <li class="sale"><img
```

* CSS

```
1 @layer base, layout;
2
3 .highlight:nth-child(2) { /* = Select
the element with the class .highlight
that is also the 2nd child */
4   outline: 0.3rem dashed lightgreen;
5   outline-offset: 0.7rem;
6 }
7
8 :nth-child(2 of .highlight) { /* =
```

○ JS

```
1
```

 Squarespace: Easily Grow Your Business with Squarespace X

Record Wall

Accent colours

93

92

93

15.4

CSS Demo: accent-color

RESET

```
accent-color: red;
```

```
accent-color: #74992e;
```

```
accent-color: rgb(255, 255, 255);
```

```
accent-color: hsl(250, 100%, 50%);
```

Example Label

Accent Color

Tint built-in HTML elements

Checkbox

Radio Buttons

Range Slider

Progress element

Accent colour supported elements:

- checkbox
- radio
- range
- progress

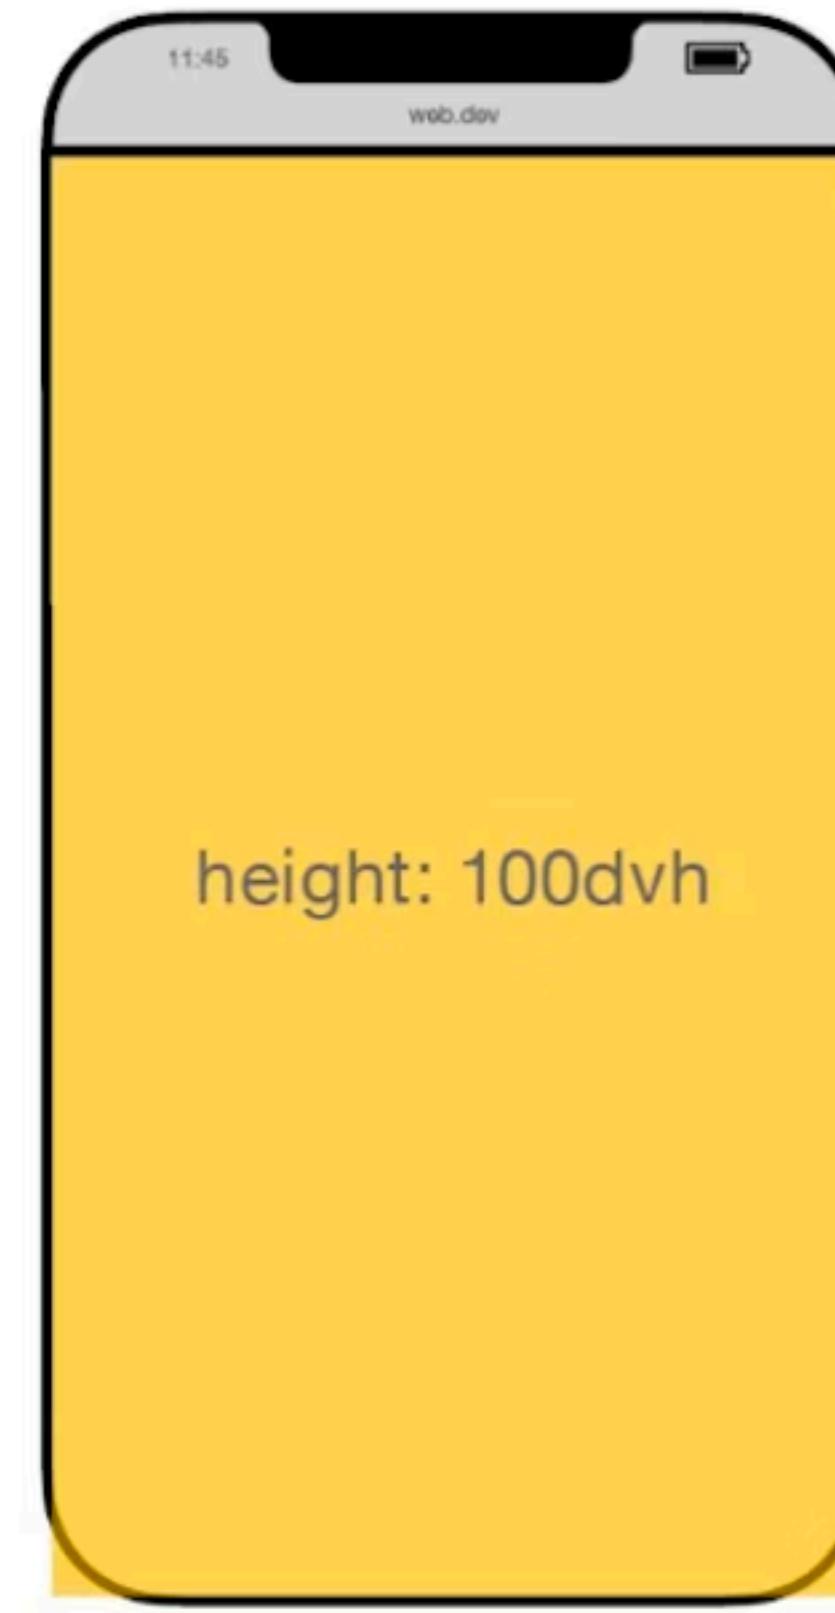

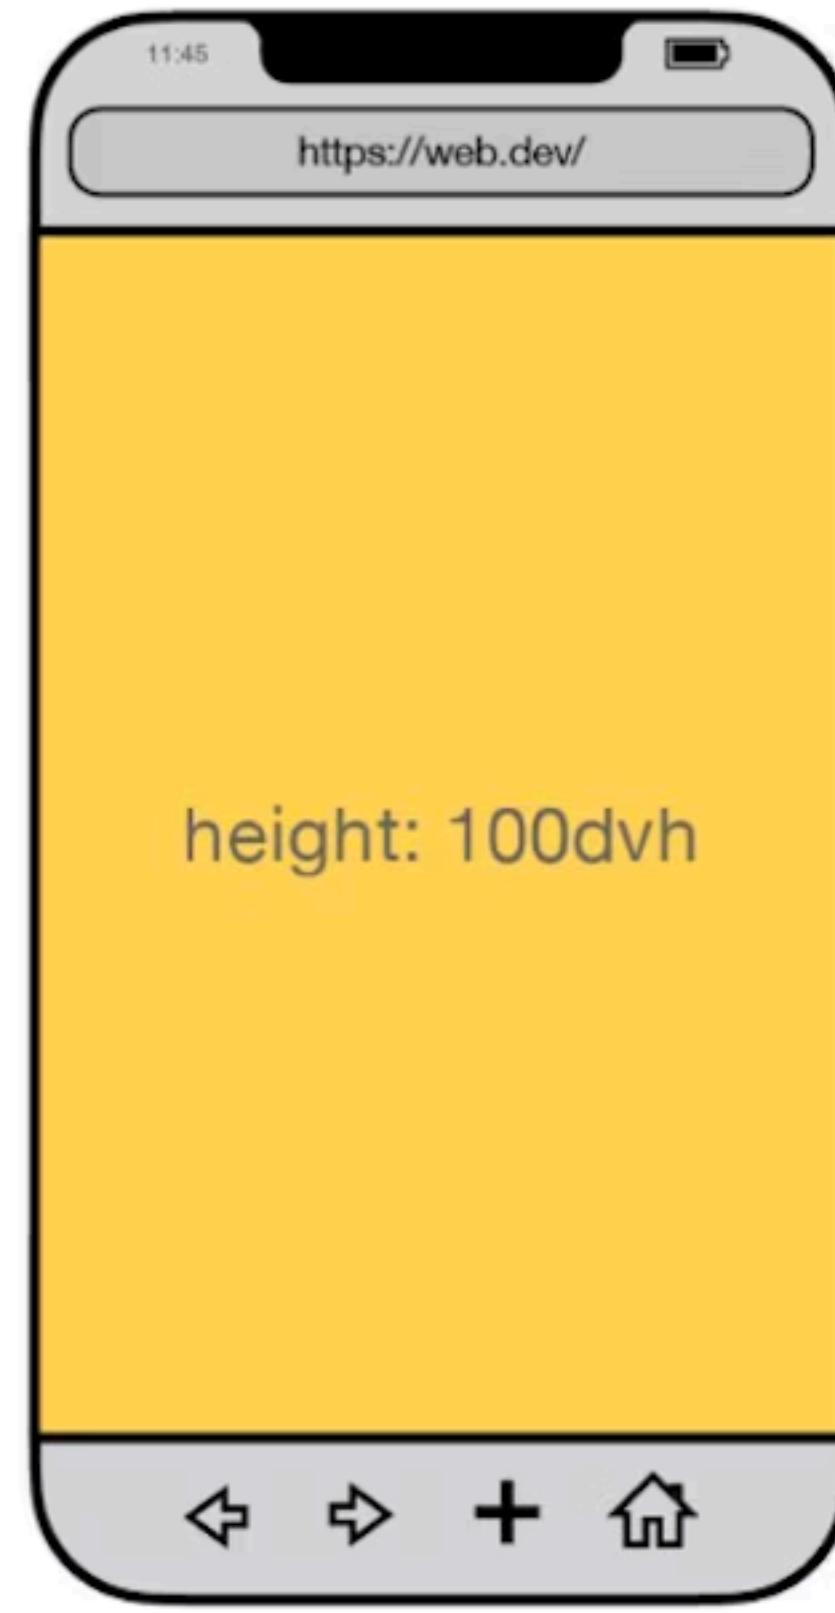

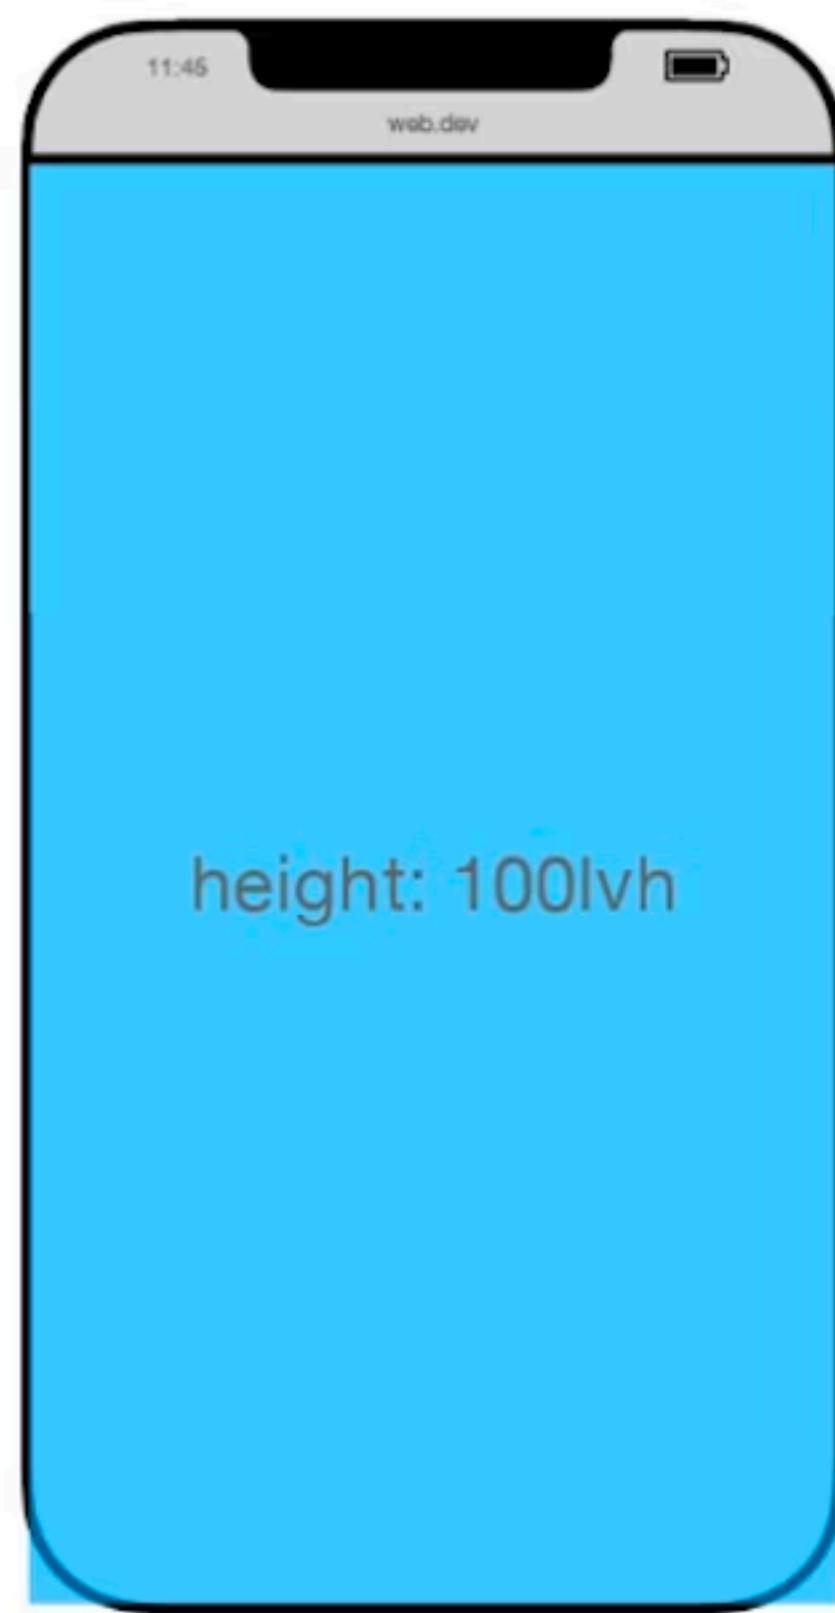

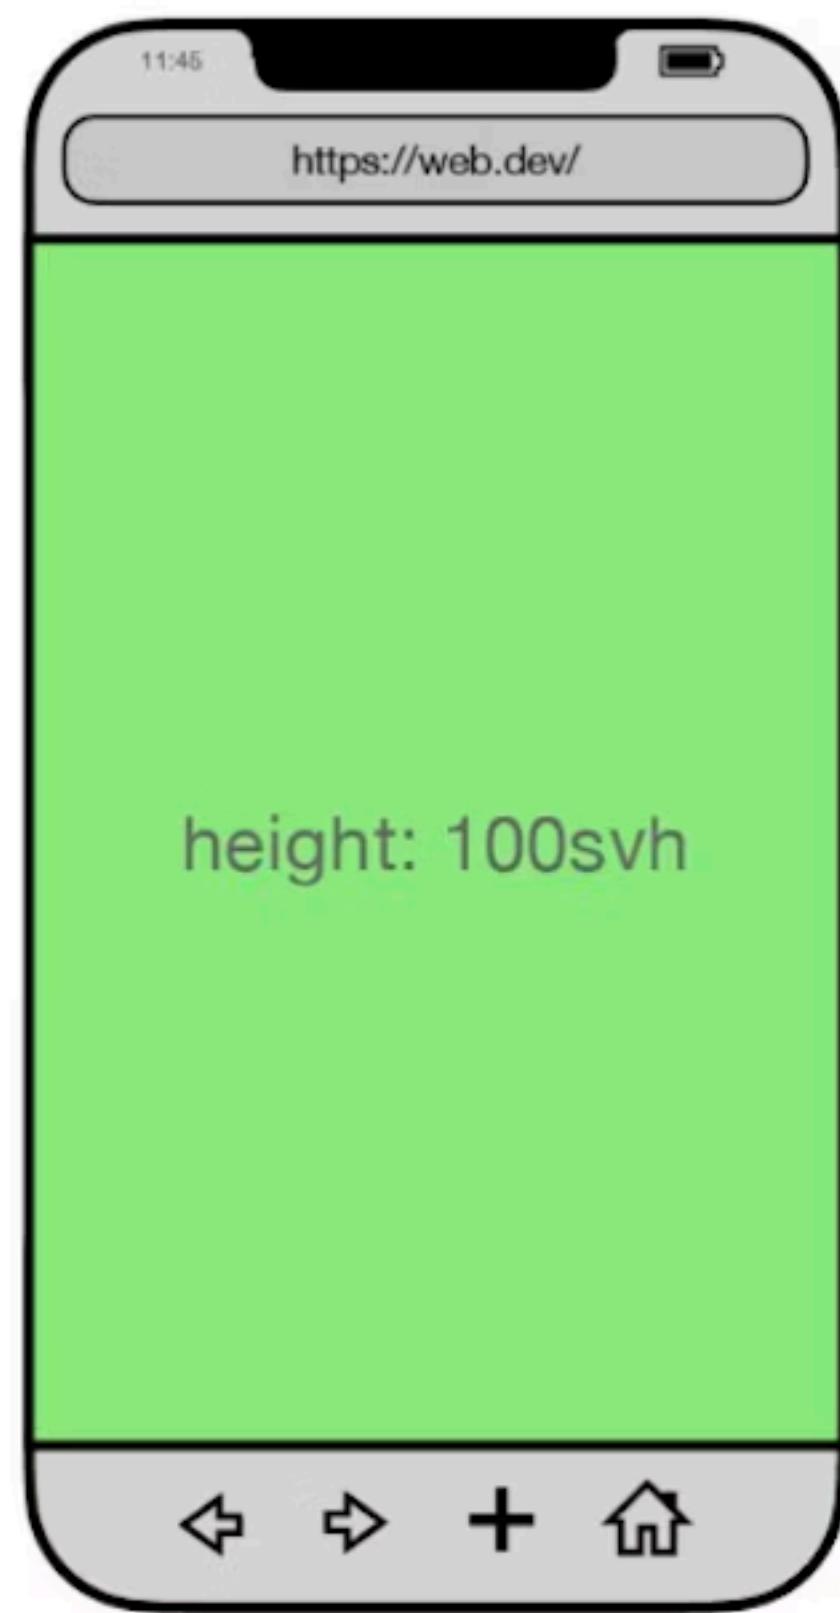

Individual transform properties

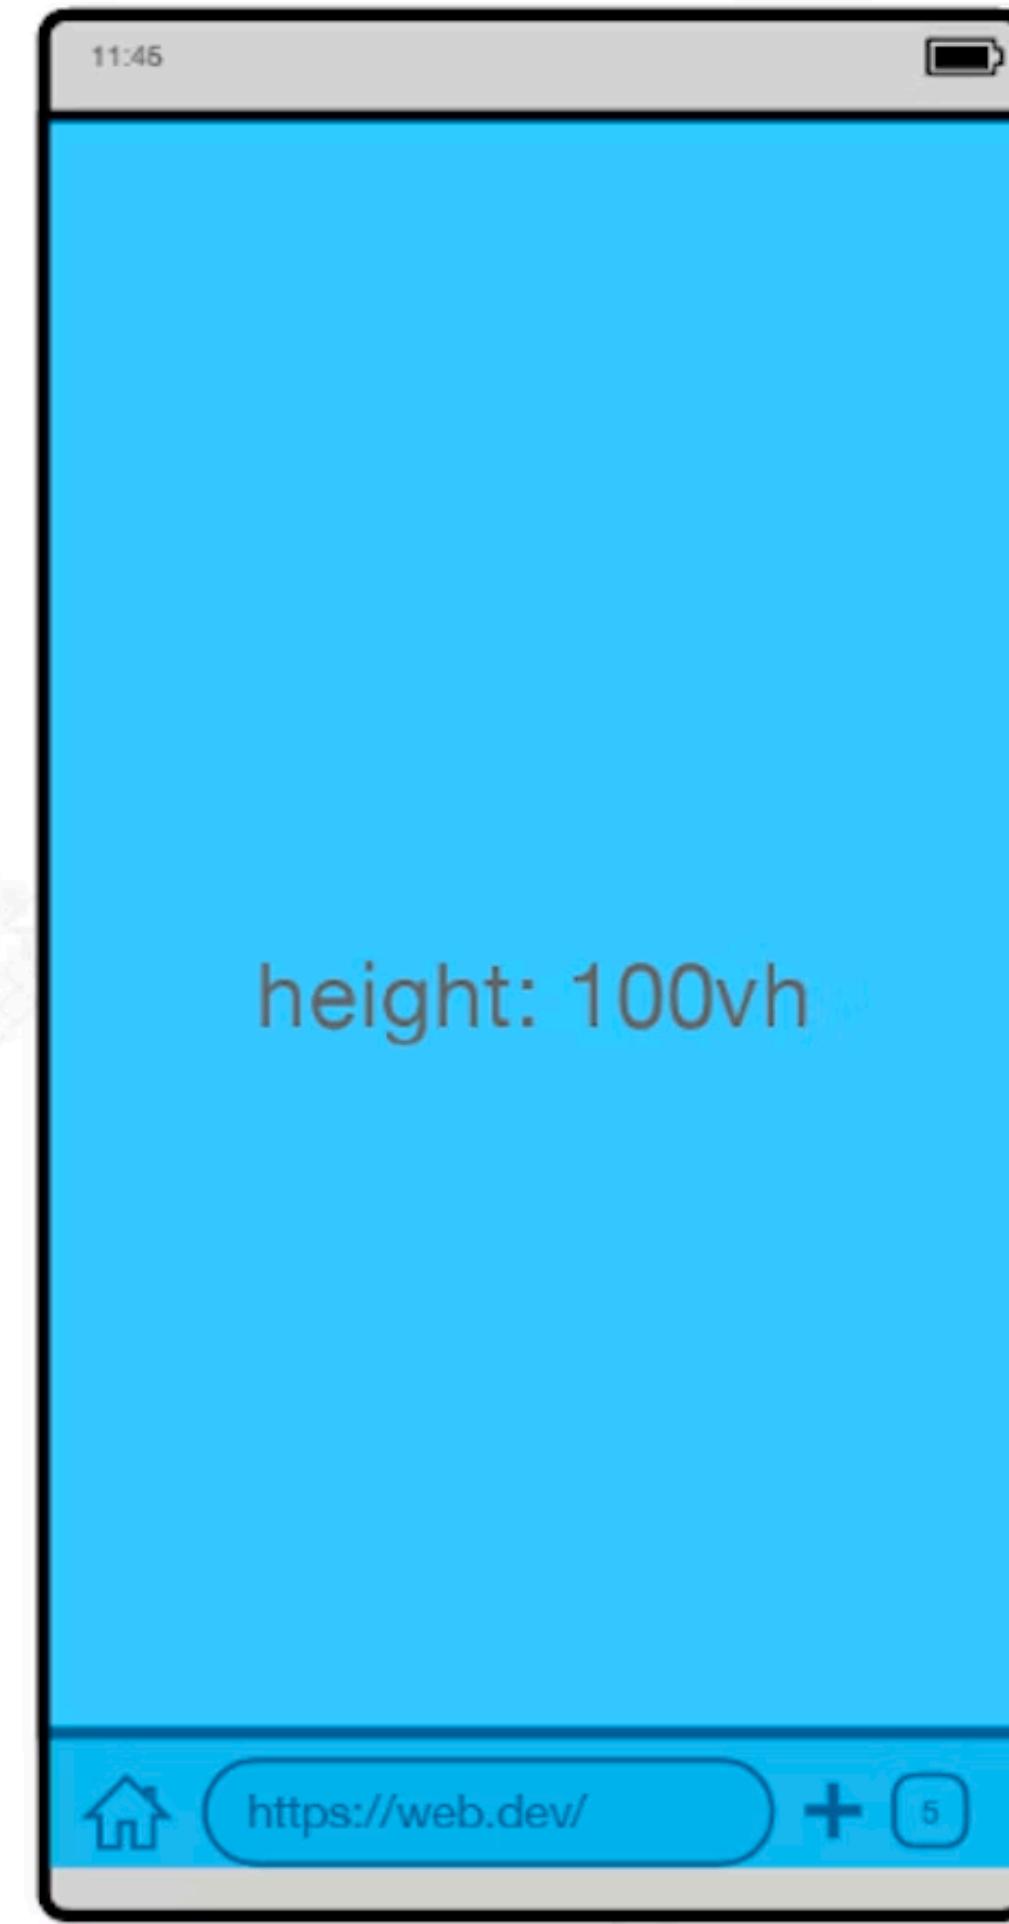

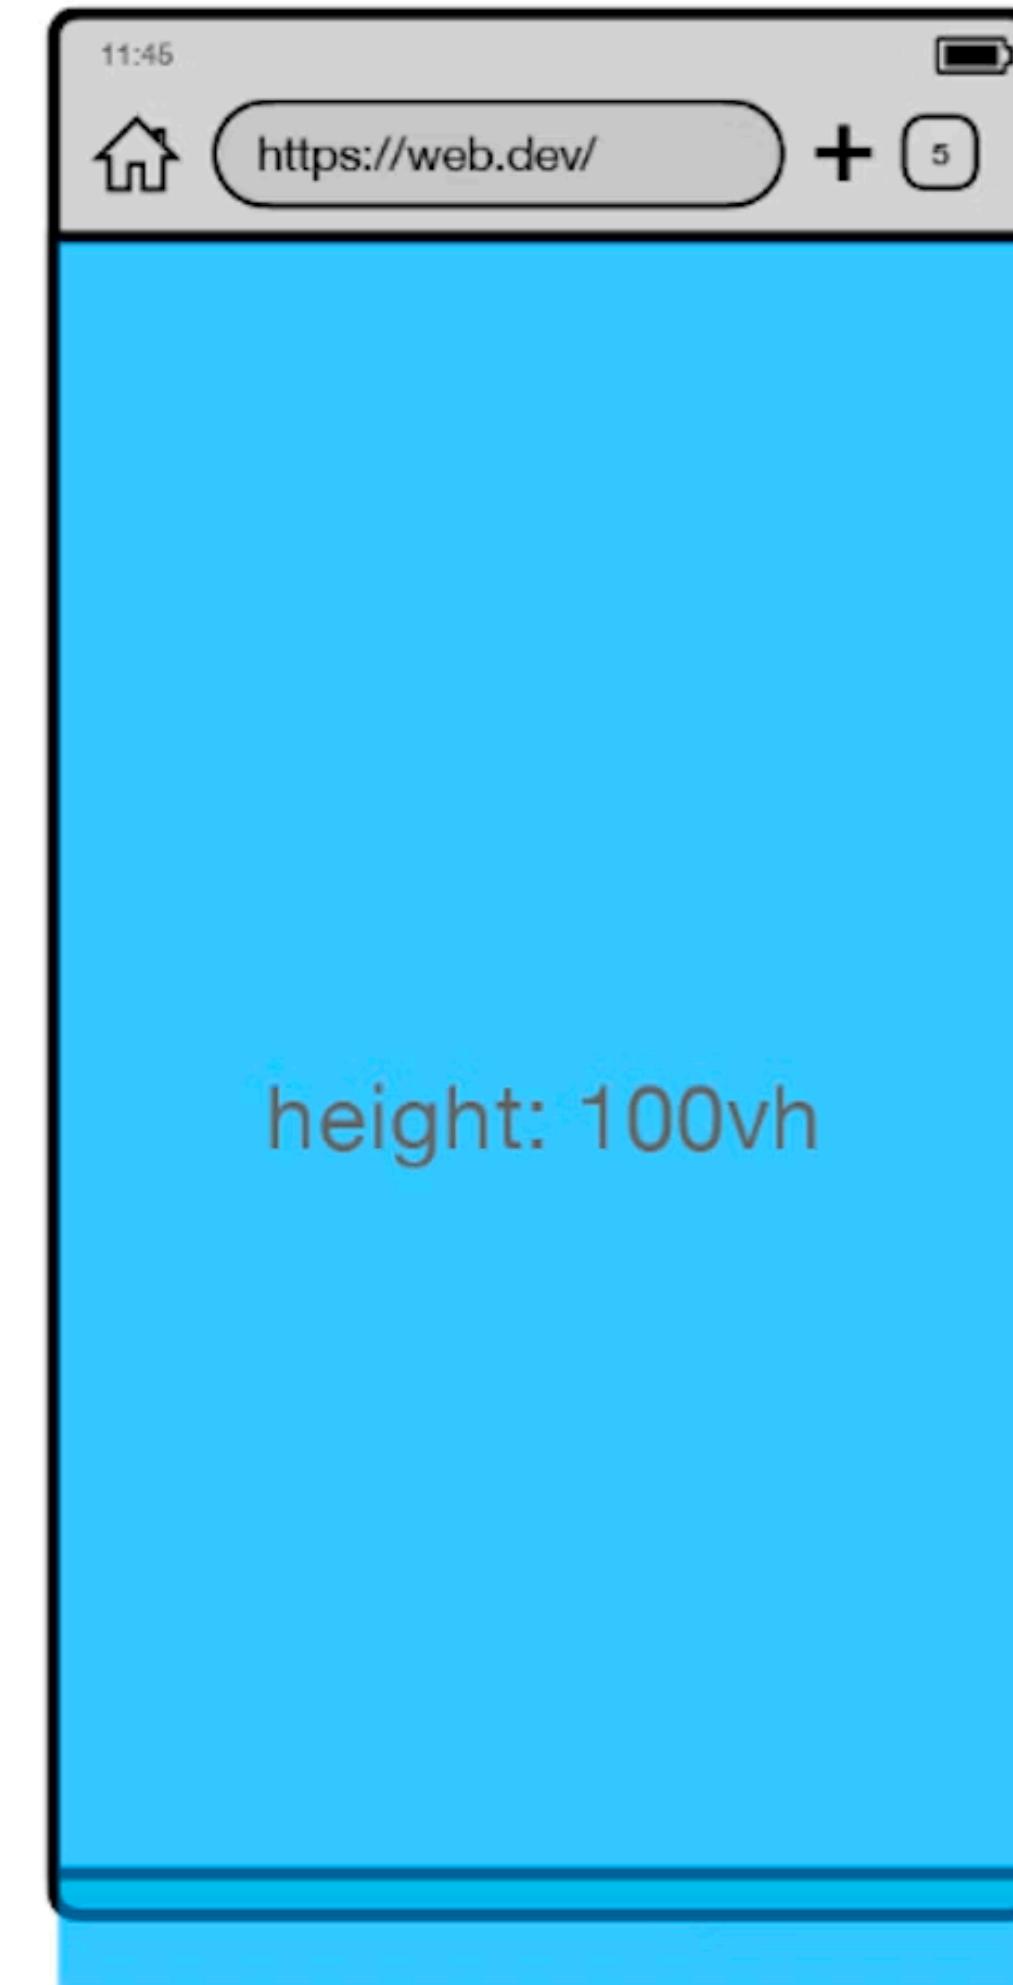

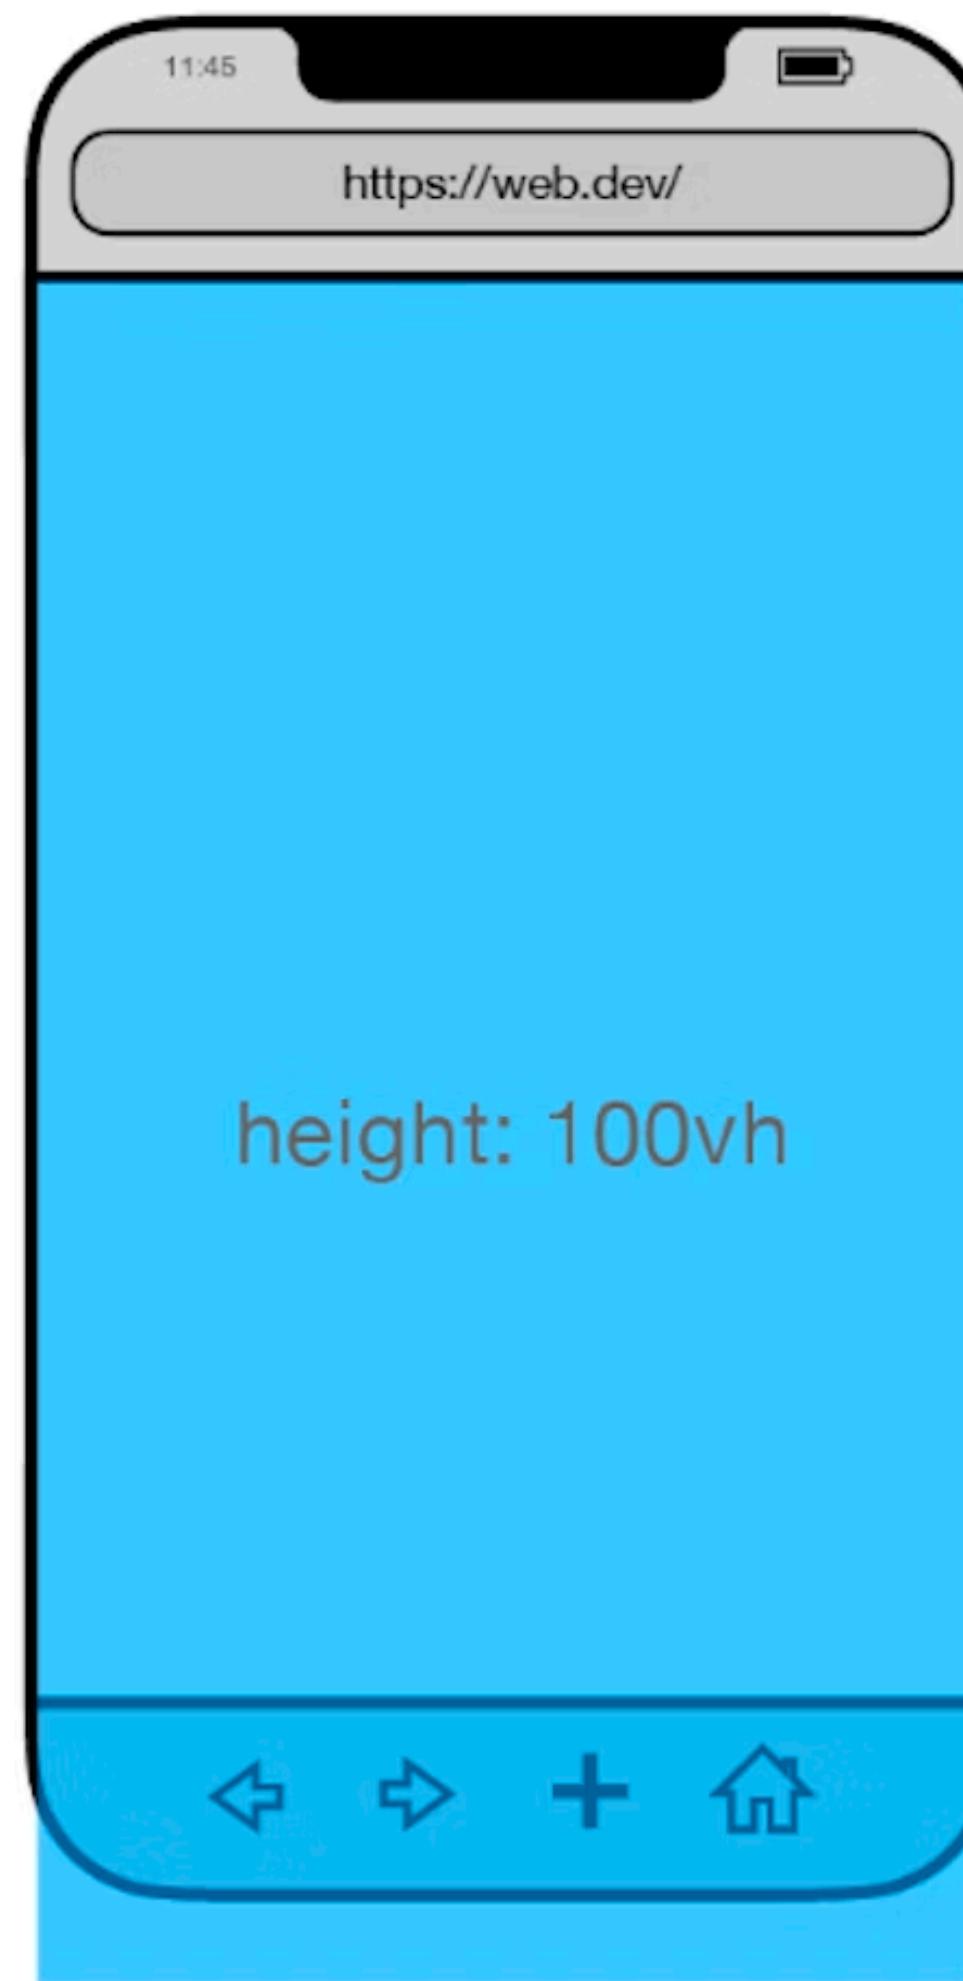

```
.target {  
  translate: 50% 0;  
  rotate: 30deg;  
  scale: 1.2;  
}  
  
.target:hover {  
  scale: 2;  
}
```

Dynamic viewport units

 108  101  108  15.4

Without dynamic viewport units

- Small viewport height and width (or `svh` and `svw`), which represent the smallest active viewport size.
- Large viewport height and width (`lvh` and `lvw`), which represent the largest size.
- Dynamic viewport height and width (`dvh` and `dvw`).

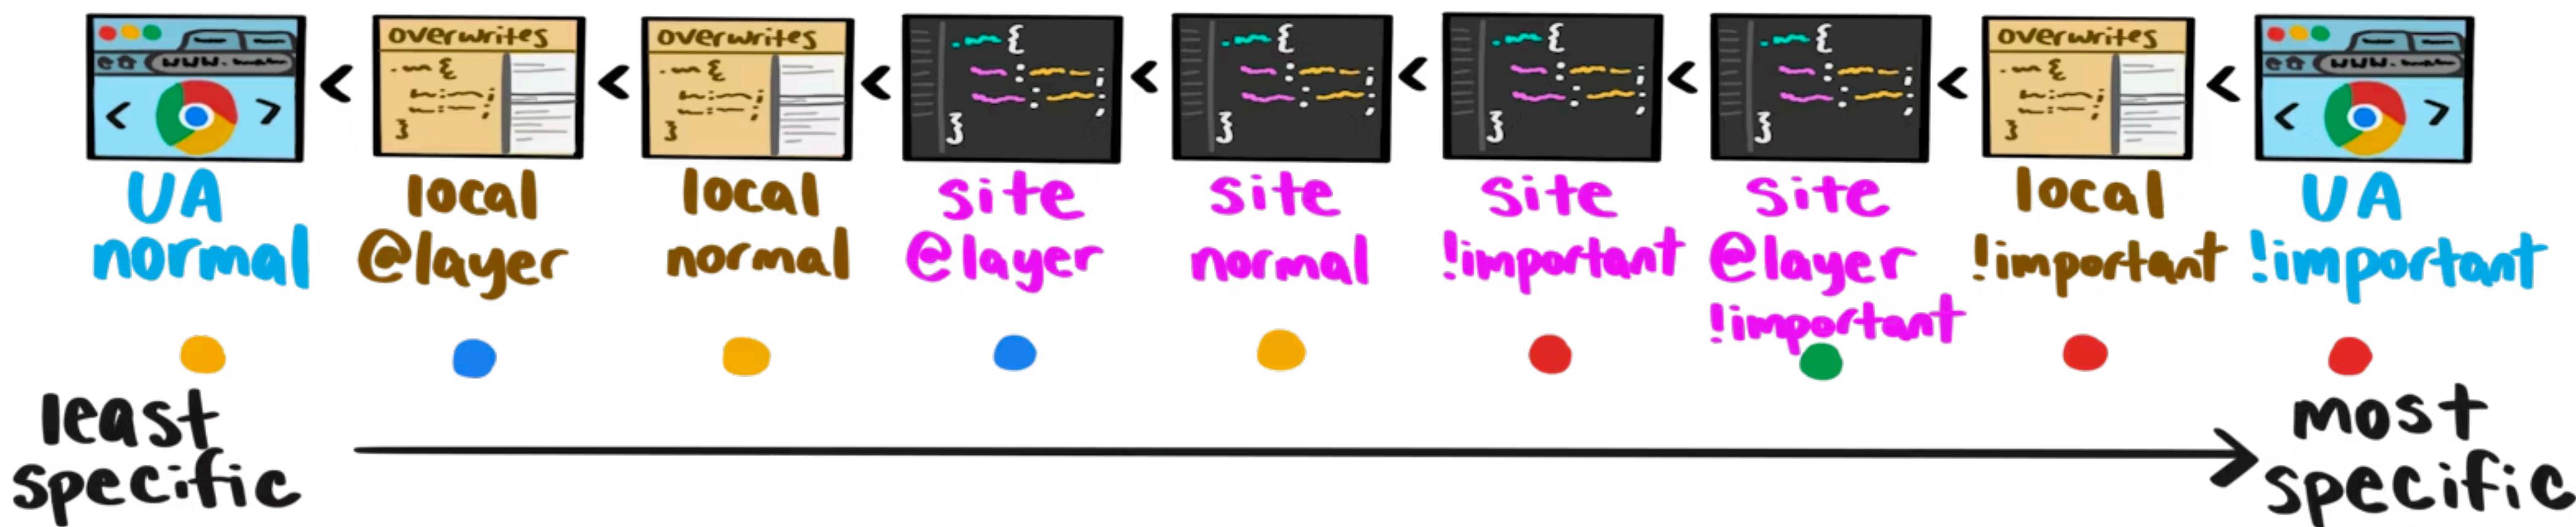

CSS Layers

A screenshot of a code editor window titled "index.css". The code editor displays the following CSS code:

```
1 @import url('antd/dist/antd.css') layer(ant-design);  
2  
3 body {  
4   margin: 0;  
5   font-family: 'Public Sans', -apple-system, BlinkMacSystemFont, '  
6     Segoe UI', 'Roboto', 'Oxygen',  
7     'Ubuntu', 'Cantarell', 'Fira Sans', 'Droid Sans', 'Helvetica Neue'  
8     , sans-serif;  
9   -webkit-font-smoothing: antialiased;  
10  -moz-osx-font-smoothing: grayscale;  
11 }  
12  
13 h1, h2, h3, h4, h5, h6 {  
14   font-weight: 500;  
15 }
```

The code editor interface includes a status bar at the bottom with the following information: Line 1, Column 53, feature/update-hotjar-code 1, Spaces: 2, and CSS.

Scroll-based animations in CSS

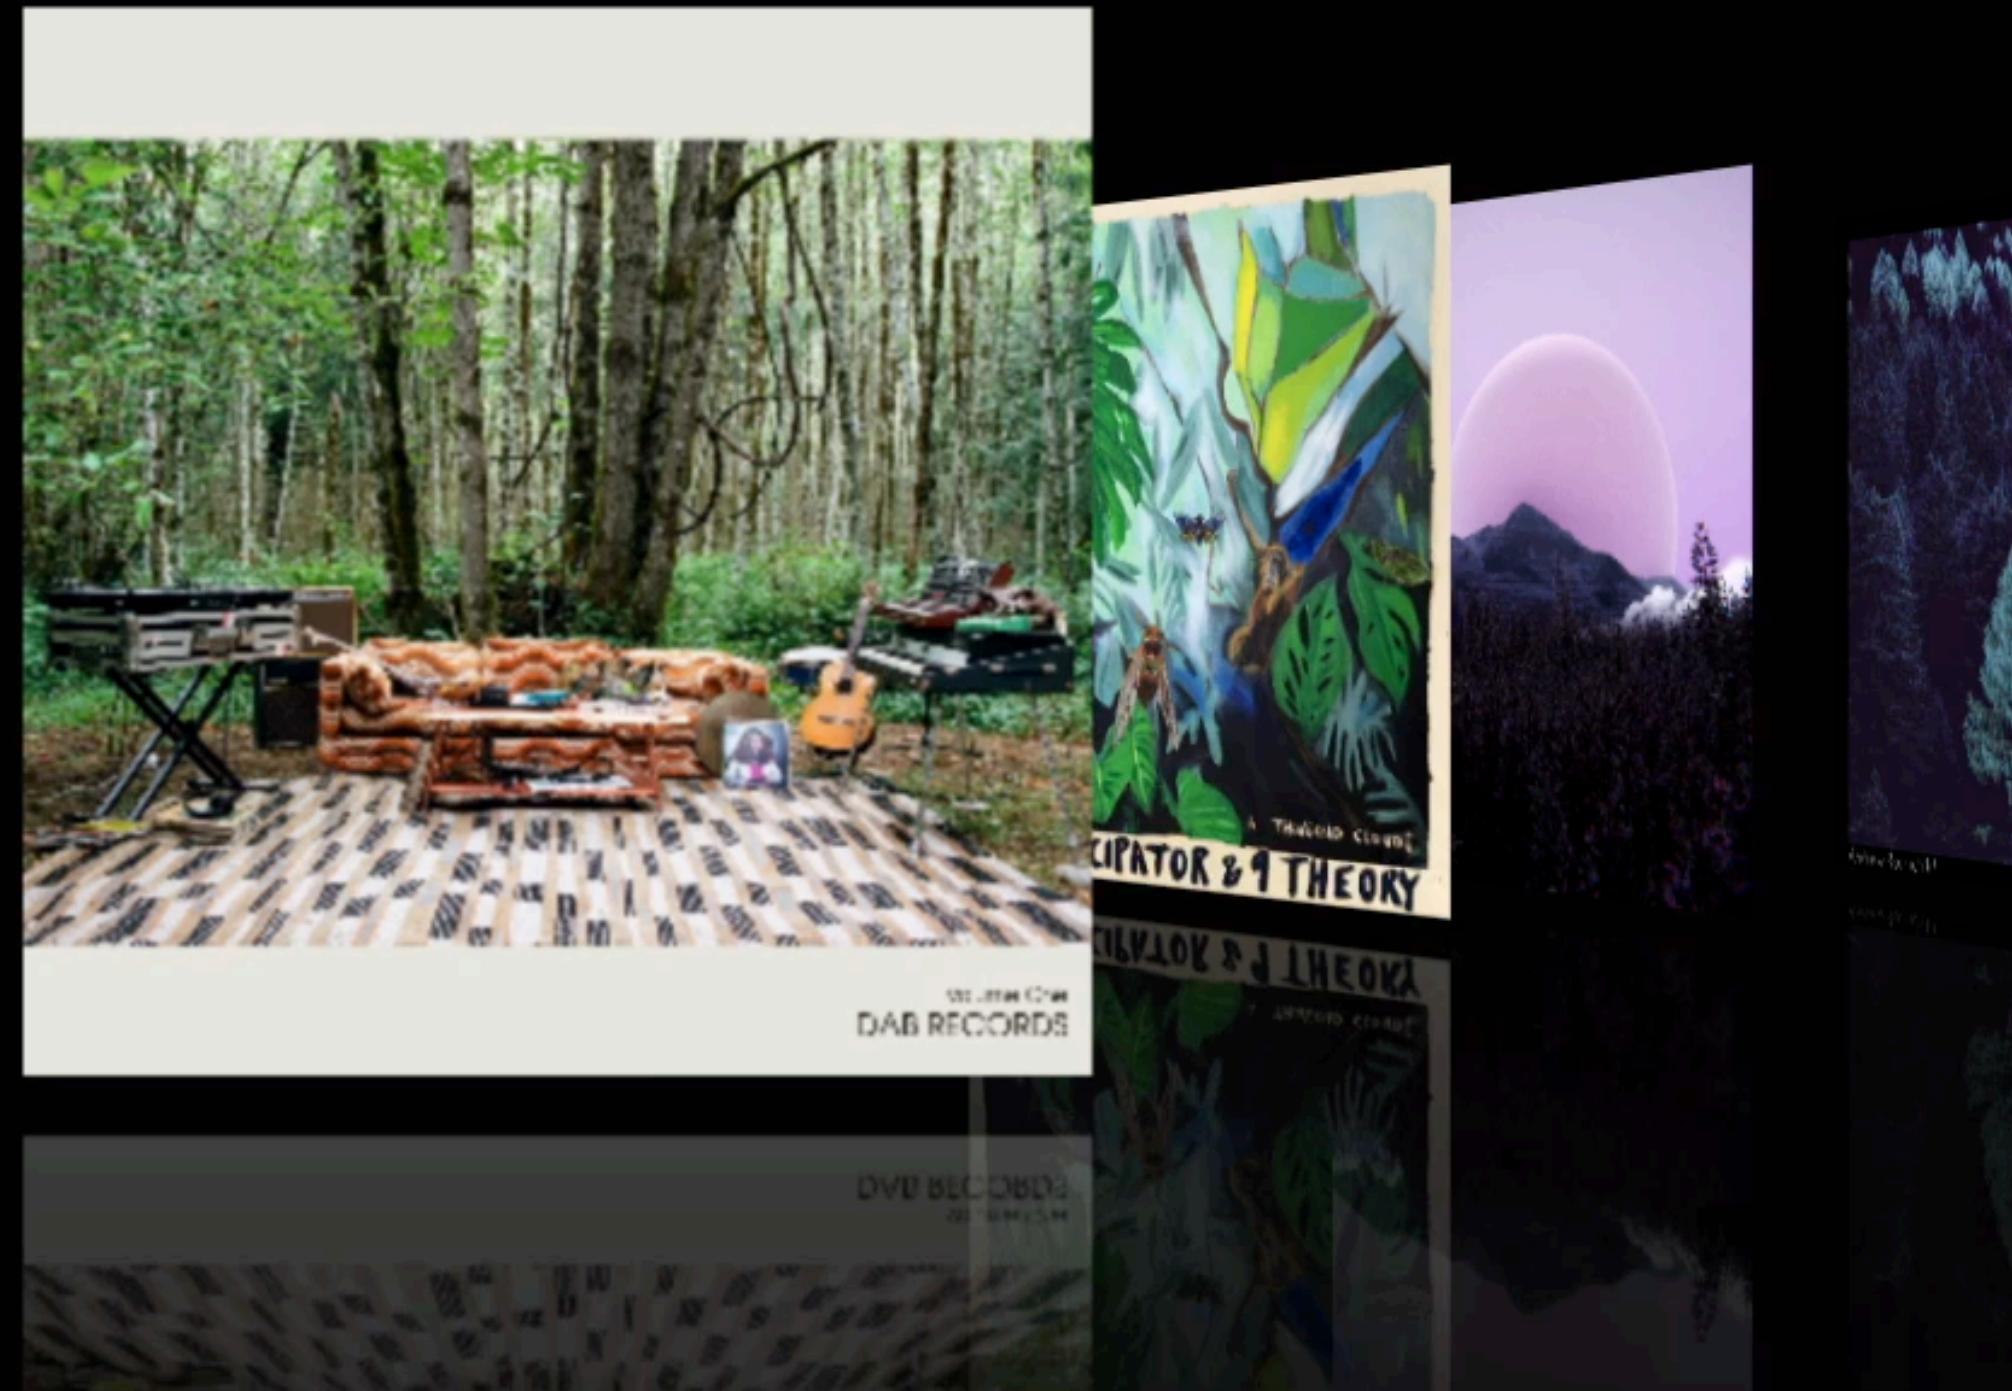

```
<body>
  <div id="progress"></div>
  ...
</body>
```

```
@keyframes grow-progress {
  from { transform: scaleX(0); }
  to { transform: scaleX(1); }
}

#progress {
  position: fixed;
  left: 0; top: 0;
  width: 100%; height: 1em;
  background: red;

  transform-origin: 0 50%;
  animation: grow-progress auto linear;
  animation-timeline: scroll();
}
```

<https://developer.chrome.com/blog/whats-new-css-ui-2023/#scroll-driven-animations>

initial-letter

Browser support

The screenshot shows a web page with a large, stylized blue letter 'A' at the top. Below it is a paragraph of text: "nother lorem ipsum dolor sit amet consectetur adipisicing elit. Fugit, deleniti saepe! Labore alias nemo quam preferendis harum ducimus at qui omnis magni amet eius, optio dolorum? Aliquid harum molestias voluptatibus." Further down is another paragraph: "Rerum unde accusantium distinctio dolore, nulla mollitia aliquid assumenda voluptate sunt quasi! Ipsum, doloribus similiique! Praesentium nobis, optio a nemo ad ex laboriosam nam eos cumque architecto voluptatum nostrum earum!"

```
p:first-letter {  
    initial-letter: 5.5 4;  
}
```

Below the code snippet are two sliders: "Lines" and "Offset".

Popover API

Chrome 114, Safari 17 - TP

```
<div id="event-popup" popover>
  <!-- Popover content goes in here -->
</div>

<button popovertarget="event-popup">Create New Event</button>
```

Support for top-layer, so **you don't have to manage z-index**. When you open a popover or a dialog, you're promoting that element to a special layer on top of the page.

Light-dismiss behavior for free in auto popovers, so **when you click outside of an element, the popover is dismissed**, removed from the accessibility tree, and focus properly managed.

Default accessibility for the connective tissue of the popover's target and the popover itself.

You can now animate display!

```
.settings-popover {  
  &:popover-open {  
    /* 0. before-change */  
    @starting-style {  
      transform: translateY(20px);  
      opacity: 0;  
    }  
  
    /* 1. open (changed) state */  
    transform: translateY(0);  
    opacity: 1;  
  }  
  
  /* 2. After-change state */  
  transform: translateY(-50px);  
  opacity: 0;  
  
  /* enumerate transitioning properties, including display */  
  transition: transform 0.5s, opacity 0.5s, display 0.5s;  
}
```

Settings Toolbar

text-wrap: balance

Chrome 114

Experimental/Upcoming

Scoped Styles

Browser support

```
@scope (.card) {  
  .title {  
    font-weight: bold;  
  }  
}
```

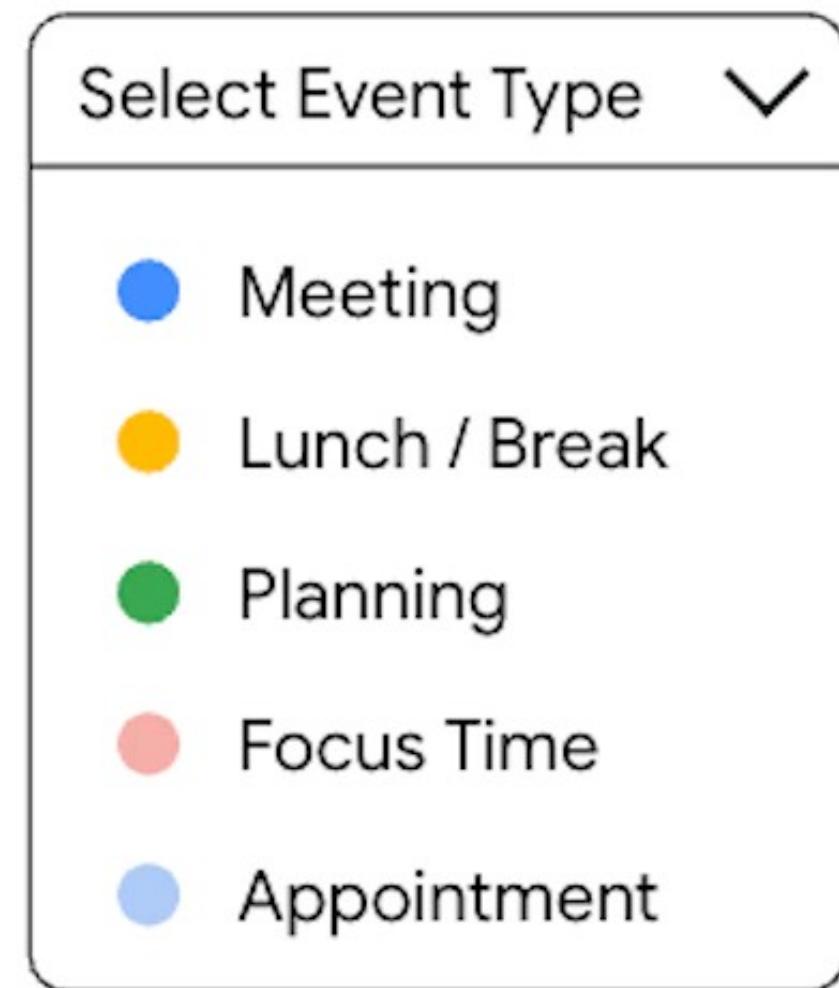

Anchor positioning

<https://drafts.csswg.org/css-anchor-position-1/>

```
.center-tooltip {  
  position-fallback: --top-then-bottom;  
  translate: -50% 0;  
}  
  
@position-fallback --top-then-bottom {  
  @try {  
    bottom: calc(anchor(top) + 0.5rem);  
    left: anchor(center);  
  }  
  
  @try {  
    top: calc(anchor(bottom) + 0.5rem);  
    left: anchor(center);  
  }  
}
```

<selectmenu>

Available in Chrome with experimental flag enabled

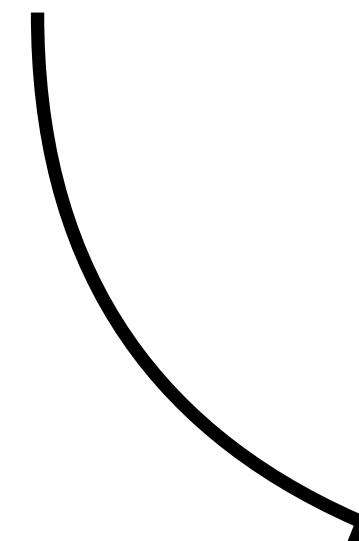

```
<selectmenu>
  <button slot="button" behavior="button">
    <span>Select event type</span>
    <span behavior="selected-value" slot="selected-value"></span>
    <span></span>
  </button>
  <option value="meeting">
    <figure class="royalblue"></figure>
    <p>Meeting</p>
  </option>
  <option value="break">
    <figure class="gold"></figure>
    <p>Lunch/Break</p>
  </option>
  ...
</selectmenu>
```
